

CPSC 304 Project Cover Page

Milestone # : 3

Date : 31-October-2025

Group Number : 73

Name	UBC Student #	UBC CSID	Email
Jaden Victor Majid	94916335	n6q1z	majid.jaden@gmail.com
Trevor Kozek	29541778	d7h3b	tkozek@student.ubc.ca
Raymond Lee	36028942	t7z4t	lraymond@student.ubc.ca

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above.

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

MILESTONE 3

SUMMARY OF PROJECT

This project is a centralized database for a theme park designed to integrate ticketing, hotel reservation systems, loyalty programs, and ride operations. By consolidating all customer and operational data into one platform, it enables staff and management to efficiently monitor guest activity, apply rate modifiers, validate ride access, and track maintenance.

TIMELINE & TASK BREAKDOWN

Please view the timeline & task breakdown table attached at the end of this document.

COMMIT HISTORY

Milestones 1, 2, and 3 have been added to the repository.

All members have made commitments using their UBC CS email account.

TECH STACK

We will be using the JavaScript/CS department provided Oracle for this project.

DESCRIPTION OF CHALLENGES

We have documented potential challenges we foresee and our mitigation plans in our task breakdown table at the end of this pdf. Where applicable, we broke larger tasks into separate research phrases and implementation.

Other areas we may have challenges include implementing the front-end as our team has little experience in this area. As this will be more of a learning curve, we have noted and marked in our timeline specific time dedicated to looking up documentation and/or video tutorials to determine how to make the specific elements we need in our project. We have also noted that there may be a challenge with time constraints due to the short turn around between milestone 4 and 5. To mitigate this, we intend to start early, particularly on the portions involving implementing the SQL queries, to allow for ample time to resolve any technical challenges or bugs that arise in the process.

Lastly, there may be periods of time where some group members are busier than others, or there may be scheduling conflicts. To address this, we will use Discord as our primary communication platform and provide regular updates on progress to ensure everyone has enough information to stay aligned on tasks, adjust workloads, and maintain steady project momentum.

Checkpoint #	TASK TITLE	TASK OWNER	DUE DATE	NOTES	CHALLENGES/MITIGATIONS	Status	Comments
4	Project Implementation	ALL	2025-11-28			In Progress	
ADMIN	Cover Page	Jaden	2025-11-23	Cover page has been completed and the information on it is accurate. The cover page has been included in the submission.		Incomplete	
	Repository Link	Jaden	2025-11-23	A link to the group's repository has been submitted.		Incomplete	
	SQL Script to create tables is in the database	Jaden	2025-11-23	SQL script to create all the tables and data in the database If constraints are needed to model some aspects of the ER diagram, they have been added. Note: Due to a lack of available examples, if assertions or triggers are required, you may simply say what they would need to do, but not implement them. If you DID implement them, please make a big fuss of them so that your TA can consider giving you extra credit.		Complete	
	Project Description	Ray	2025-11-25	Description of the final project and what it accomplished Must be in PDF Description of how final schema differed from initial schema turned in		Incomplete	
	Project Screenshots	Trevor	2025-11-25	In Milestone PDF		Incomplete	
	Add README File	Trevor	2025-11-25			Incomplete	
	Validate General Expectations in Rubric	Trevor	2025-11-25			Incomplete	
	Final Schema	Trevor	2025-11-25	Write description of how final schema differed from schema we turned in, and why.		Incomplete	
	List of all SQL queries	Trevor	2025-11-25	A list of all SQL queries used to satisfy the rubric items and where each query can be found in your code (WITH FILE NAME AND LINE NUMBERS)		Incomplete	
	SQL Queries 7-10	Trevor	2025-11-25	For SQL queries 7 through 10 inclusive, include a copy of your SQL query and a maximum of 1-2 sentences describing what that query does. You can embed this in your above list of queries. You don't need to include the output of the query. The purpose of this requirement is to allow your TAs time outside of your presentation to verify these more complex queries are well formed.		Incomplete	
	Audit Milestone Requirements	ALL	2025-11-25			Incomplete	
	Compile PDF and submit	Ray	2025-11-25				
	Queries: INSERT Operation	Ray	2025-11-10	Can do INSERT INTO CUSTOMER, because CUSTOMER has a total partial disjoint relation with Guest and LoyaltyMember which both have an attribute of CUSTOMER as a FK	May run into bugs or issues when implementing these, so start early!!!	Incomplete	
	Queries: DELETE Operation	Ray	2025-11-10	Can do on Customer, because we are doing an insert on customer so it makes sense for testing to do a delete on it too	May run into bugs or issues when implementing these, so start early!!!	Incomplete	
	Queries: UPDATE Operation	Ray	2025-11-10	Can do on Customer as well for same reasoning as above, customers should also be able to update their info	May run into bugs or issues when implementing these, so start early!!!	Incomplete	
	Queries: Selection	Ray	2025-11-10	Can do on a Customers looking at their upcoming bookings	May run into bugs or issues when implementing these, so start early!!!	Incomplete	

QUERIES	Queries: Projection	Ray	2025-11-10	Can in the same query as selection	May run into bugs or issues when implementing these, so start early!!!	Incomplete	
	Queries: Join	Trevor	2025-11-10	Can do a join on customers that have booked hotel bookings on a certain day for hotel staff to check special requests or somethign	May run into bugs or issues when implementing these, so start early!!!	Incomplete	
				Can group customers by age range to find Relations needed: • You must implement one query of this category using relation(s) of your choice. Input format: • You must provide an interface (e.g., button, dropdown, etc.) for the user to execute the query. Additional notes: • The query must use aggregation (e.g., min, max, average, or count).		Incomplete	
	Queries: Aggregation with Group By	Jaden	2025-11-10		May run into bugs or issues when implementing these, so start early!!!		
				Relations needed: • You must implement one query of this category using relation(s) of your choice. Input format: • You must provide an interface (e.g., button, dropdown, etc.) for the user to execute the query. Additional notes: • The query must include a HAVING clause.		Incomplete	
	Queries: Aggregation with Having	Jaden	2025-11-10		May run into bugs or issues when implementing these, so start early!!!		
				Relations needed: • You must implement one query of this category using relation(s) of your choice. Input format: • You must provide an interface (e.g., button, dropdown, etc.) for the user to execute the query. Additional notes: • The query must find some aggregated value for each group. • It is fine to use a view to get the desired behaviour.		Incomplete	
	Queries: Nested Aggregation with Group By	Jaden	2025-11-10		May run into bugs or issues when implementing these, so start early!!!		
				Relations needed: • You must implement one query of this category using relation(s) of your choice. Input format: • You must provide an interface (e.g., button, dropdown, etc.) for the user to execute the query. Additional notes: • The query must do division.		Incomplete	
	Queries: Division	Jaden	2025-11-10		May run into bugs or issues when implementing these, so start early!!!		
5 Project Demo		ALL	2025-12-02	*MILESTONE 5 MEETINGS ARE DEC 3-5		Incomplete	
	Sketch GUI	Ray	2025-11-08		There is not alot of time for iteration. So we are not doing this on Figma (keeping it lo-fi prototype) for time purposes	Incomplete	
	GUI design finalized	Ray + Jaden	2025-11-08			Incomplete	
	Research how to make specific elements in the GUI (ie. dropdowns, buttons). Look up documentation or video tutorials	Ray + Jaden	2025-11-14			Incomplete	
	GUI Functional code finalized	Jaden	2025-11-18		None of us have written front end JS, so we will need to make a basic UI, and learn how to write front end code	Incomplete	
	User Friendliness check	Trevor	2025-11-16		Get someone not in computer science to validate design, because we are all CS student-minded	Incomplete	
	GUI Non-Functional code finalized	Jaden + Trevor	2025-11-20			Incomplete	

FRONT END	(Basic Security Practices: Sanitization) Do research and determine approach	Jaden	2025-11-20	Values from the user are not directly used in the database. Basic security practices to prevent injection and rainbow attacks have been followed.		Incomplete	
	Demo Practice Run	ALL	2025-12-01	Encryption is not required. Must be able to drop, recreate, and reload tables	we may encounter some errors that we do not predict, we can find someone outside of our group to test	Incomplete	
	Basic Error Handling	Jaden + Ray	2025-12-01	The user receives notifications about user errors such as trying to insert a duplicate value, invalid input (e.g., invalid characters or an int when only strings are allowed etc.), etc.	we may encounter some errors that we do not predict, we can find someone outside of our group to test	Incomplete	
	Fix anything that went wrong during practice run	ALL	2025-12-02		Bugs may be big, may need more time than a day :(	Incomplete	
	(Basic Security Practices: Sanitization) Implement	Jaden	2025-12-02		SQL Injection sanitation is an open problem that is still unsolved, the final solution will NOT be perfect	Incomplete	
	Book Timeslot for Demo	Ray	2025-12-01			Incomplete	
ADMIN	Audit Milestone Requirements	ALL	2025-12-01			Incomplete	
6 Individual and Peer Assessment				ALL	2025-11-28	Incomplete	
SURVEY	Complete Survey	Jaden, Trevor, Ray	2025-11-26			Incomplete
